

FreeRTOS - Assignment 02

1. Create four task functions `vLedTask1()`, `vLedTask2()`, `vLedTask3()` and `vLedTask4()` which will toggle four different LEDs with different rate. Create four real-time tasks to execute these functions.
2. Create a task `vLedTask()` which will toggle the given LED with given rate. LED number will be given as argument. In `main()` create four real-time tasks to operate four LEDs.
